

# ENVIRONMENTAL POLICY

**We will on a continuing basis aim to-**

- **Minimise the environmental impact of processes by controlling waste, effluents and emissions and the related risk of pollution.**
- **Optimise the use of resources and the consumption and management of energy.**
- **Establish and maintain environmental emergency contingency plans.**
- **Comply with the relevant environmental legislation and regulations.**

**Special Steel Co. Ltd.** and its group of companies specialise in the procurement, processing, and testing of ferrous and non-ferrous materials which services a wide variety of industries ranging from light / heavy engineering to aerospace.

The nature of the company's activities not only places particular emphasis upon experience, expertise, reliability and quality but also on recognising the consequences of some of the operations on the environment both locally and universally.

In order to achieve our policy objectives we will maintain an efficient and effective system which has been planned and developed in conjunction with all management functions.

The company's environmental manual and the system elements outlined herein describe how the system is designed to ensure that all the environmental and regulatory requirements are recognised and that a consistent and uniform control of these requirements is adequately maintained. The manual also defines how effective control is established.

The company's environmental management system is designed and written to comply with the requirements of BS EN ISO 14001 and is aimed at enhancing the surroundings in which we operate, including air, water, land, natural resources, flora, fauna, humans and their interrelation.

It is a pre requisite that all management ensure that all employees are aware of this policy, read it and understand it.
